MOHD ABUZAR IBRAHIM

Software Engineer / Full-Stack Developer — Backend Engineering & AI Automation
abuzaribrahim755@gmail.com | 6392020329 | linkedin.com/in/abuzaribrahim | github.com/AbuzarIbrahim | Portfolio | Kanpur, India

SUMMARY

Backend-focused full-stack engineer who owns projects end to end, from client requirements to production deployment. Strong in NestJS/TypeScript, multi-tenant SaaS, RBAC, payment gateways, and LLM/voice-AI automation.

EDUCATION & CERTIFICATION

Allenhouse Institute of Technology, Kanpur — B.Tech CSE (AI & ML) July 2022 – June 2026 | CGPA: 7.0
Participated in SWAMLCS 24 — Student Workshop on Applications of Mathematics and Logic in CS (Aug 2024)

PROFESSIONAL EXPERIENCE

Cubosquare Technology Pvt. Ltd. — Backend Engineer | *Mumbai, India* Mar 2025 – Present

- Design backend architectures, REST APIs, and database schemas with Node.js, TypeScript, and NestJS; implement JWT, OTP, and RBAC.
- Build real-time (WebSockets), LLM (OpenAI, Gemini), voice-AI calling, WhatsApp API, and n8n automation features.
- Own deployment (Docker, Portainer, CI/CD), payment integrations, client requirements, and frontend coordination.

Androcoders — UI Developer Intern | *Kanpur, India* Sep 2024 – Nov 2024

- Built responsive React, TypeScript, and Tailwind CSS UIs, real-time dashboards, and AI interfaces.

MAJOR PROJECTS

1. Suvidha EMI – Mobile Device Management Platform | *NestJS, PostgreSQL, Docker, Jenkins, Razorpay, Cashfree*

- Built the backend for a 5-role EMI platform: IMEI-based device management, EMI/payment workflows, automatic device restriction on overdue EMIs, and Aadhaar OTP flows.

2. eAdvocate Diary | *NestJS, PostgreSQL, MongoDB, Firebase, Cloudinary, Docker, Jenkins* | *eadvocatediary.com*

- Owned the backend of a legal case-management platform (~30 modules): OTP/JWT auth, RBAC for senior/junior advocates, team hierarchies, case and hearing management.
- Integrated Firebase push, WhatsApp webhooks, Cloudinary, subscription payments, and AI features; deployed with Docker, Jenkins, PM2.

3. AI Voice Calling Agent | *Bun, TypeScript, Twilio, Deepgram, Gemini 2.5 Flash, OpenAI TTS, Retell AI, Vapi, n8n*

- Designed real-time voice-to-voice AI over WebSockets (Twilio, Deepgram, Gemini, TTS) with tool-calling, n8n/webhook workflows, and multilingual agents.

4. Mehram Match | *NestJS, PostgreSQL, TypeORM, Redis, WebSockets, JWT, Zod* | *mehrammatch.com*

- Built a matchmaking backend with Admin/Consultant roles, ~140 smoke-tested API endpoints, real-time chat (WebSockets + Redis), and E2E encryption architecture.

5. Rank Pilot AI – Google Business Profile SaaS | *NestJS, Next.js, PostgreSQL, OpenAI API, Google APIs, OAuth 2.0*

- Built a multi-tenant SaaS on one shared PostgreSQL database with a central tenant-scoping layer, ownership constraints, and RBAC; cross-tenant requests return 404 and suspended accounts lose access immediately.
- Integrated Google Business Profile APIs (OAuth 2.0, AES-256-GCM encrypted tokens); built a 16-rule audit engine and an OpenAI Batch API content pipeline (50% lower cost).
- Added per-location AI token metering, GST invoicing, 93 Jest tests, and Playwright end-to-end tests.

Other Work | *NestJS, n8n*

- **WhatsApp Business Automation**; **n8n AI workflows** for calling agents; **Data Extraction System** (OCR, Gmail SMTP, GitHub).

TECHNICAL SKILLS

Languages & Backend:	JavaScript, TypeScript, Java, SQL, Node.js, NestJS, Express.js, Spring Boot, Bun
Frontend:	React.js, Next.js, HTML5, CSS3, Tailwind CSS
Databases & ORM:	PostgreSQL, MongoDB, MySQL, Redis, TypeORM, Zod
APIs, Auth & Real-time:	REST APIs, Webhooks, Swagger, Postman, JWT, OTP, RBAC, OAuth 2.0, WebSockets, SSE
AI & Automation:	OpenAI, Google Gemini, Vercel AI SDK, LLM Integration, Embeddings, AI Agents, n8n
Voice AI:	Twilio, Deepgram, Retell AI, Vapi, Speech-to-Text, Text-to-Speech
DevOps & Deployment:	Docker, Jenkins, GitHub Actions, Portainer, CI/CD, PM2, Nginx
Cloud & Infrastructure:	AWS EC2, AWS S3, MinIO, Cloudflare, cPanel, Hostinger, Vercel
Payments & Tools:	Razorpay, Cashfree, Cloudinary, Grafana, Git, GitHub, Logging, Health Checks
